- Secured data and automatic back-ups
- Integrated help
- Combined software and methodology manual
- Rapid execution both for stand alone and network installation
- Customised services available
- Free updates and support

PARIS expansion modules

The TOOL KIT also contains the interfaces between BPI Team software and third party software. These interfaces are either standard or custom made.

- **PARIS** itself is a complete solution. It offers all the information about processes, risks and controls. Direct links between PARIS and documents on servers and HD's offer direct access to crucial information.

For more demanding users we also offer additional software to match competences needed with available competences. (COMO). PARIS and COMO share the same database to create a perfect interaction.

- **COMO**
Como helps you to match competences available in the organisation with competences required by processes. COMO brings available and needed competences in line.
- The **TOOL KIT** contains extra features that give an extra value to PARIS and COMO.
